1. A method of continuously tuning a transconductance comprising:
coupling a degeneration resistance from a first source of a first transistor in a differential pair of transistors to a second source of a second transistor in the differential pair of transistors:
applying a second variable degeneration resistance in parallel to the first degeneration resistance in response to the application of a first variable control voltage; and
applying a third variable degeneration resistance in parallel to the first degeneration resistance and the second degeneration resistance in response to the application of a second variable control voltage having a fixed voltage offset from the first variable control voltage.
